Ayodeji AbdulHaqq Buraimoh

ayodeji@ayodejib.dev Website (+234) 906-173-0928 Github LinkedIn

Technical Skills

- **Languages:** TypeScript, JavaScript, Python, HTML5/CSS3
- **Frontend Development:** React, Next.js/Vite, Tailwind CSS, Leaflet.js, Responsive UI/UX Architecture
- **Backend & APIs:** Node.js, Bun, ElysiaJS, Express, RESTful APIs, Webhooks
- **Databases & ORMs:** PostgreSQL, SQLite, MongoDB, Redis, Supabase, Prisma, Drizzle ORM
- **Cloud, DevOps & Tunnels:** Docker, Portainer, Nginx Proxy Manager, Cloudflare (Workers, Tunnels), Microsoft Azure, CI/CD Pipelines, GitHub (Runners, Actions)
- **Systems Administration & Networking:** Linux (Debian/Ubuntu), Windows Server, Active Directory, Hypervisors/VMs, DNS Management, SSL/TLS, Fiber Optics & OTDR Testing

Professional Experience

2023 - Present

Freelance Full-Stack Engineer | Independent Contractor

- **Engineered an edge-backed appointment scheduling platform** (Ornate Mental Health Services) utilizing Cloudflare KV to lock dynamic availability slots in real time, integrating the Resend API to automate dual-party booking confirmations.
- **Developed a secure multi-part intake pipeline** (Glorious Eagles) supporting client document uploads, implementing server-side MIME-type verification, file size constraints, and automated transactional email dispatch.
- **Built a responsive non-profit web platform** (Ginoba Foundation) featuring an integrated Donorbox payment gateway to securely process one-time and recurring online donations.
- **Delivered end-to-end frontend and backend architectures** across client engagements, translating design mockups into accessible, cross-device interfaces optimized for fast asset loading and zero-downtime hosting.

AUGUST 2024 - PRESENT

BT Technologies, Lagos NG | Full-Stack Developer & Systems Administrator

- **Redesigned and engineered the corporate web platform** from the ground up, implementing responsive UI architectures, asset optimization strategies, and a transactional inquiry pipeline powered by the Resend API.
- **Built and deployed internal web applications**, including a dedicated invoice tracking system to manage client billing lifecycles and a centralized technical documentation portal for technical staff onboarding.
- **Deployed and configured Frappe ERPNext & HRMS environments**, centralizing internal operations, human resource records, and organizational workflows.
- **Administered Windows Server and Active Directory (AD DS) infrastructure**, designing Group Policy Objects (GPOs) for automated workstation software provisioning and configuring secure, centralized roaming user directories.
- **Engineered backup and network integrity protocols**, automating virtual machine (VM) snapshots, configuring network storage redundancy, and performing Optical Time-Domain Reflectometer (OTDR) fiber diagnostics.

Projects

Sentinel | TypeScript Monorepo & Automation Engine

Technologies: Bun, TypeScript, ElysiaJS, SQLite, Leaflet, Discord.js, Docker

- **Architected a decoupled TypeScript monorepo using Bun**, unifying a high-throughput ElysiaJS REST API, an asynchronous Discord automation bot, and a background cron worker into a modular codebase.
- **Engineered a dynamic vector-to-image rendering engine** that parses game territory SVGs, injects real-time state fill colors, and rasterizes them into PNG buffers for automated Discord alert dispatches.
- **Built an interactive geospatial visualization dashboard** using Leaflet to render territorial control maps, supported by a localized SQLite database layer for caching and state management.

Cloud Infrastructure Lab | Systems & DevOps

Technologies: Docker, Portainer, Nginx Proxy Manager, Cloudflare, Linux (Ubuntu), VPS

- **Provisioned and maintain a production-grade virtual private server (VPS) environment**, orchestrating containerized microservices and production apps (including Sentinel) via Docker and Portainer.
- **Configured Nginx Proxy Manager as a centralized reverse proxy**, managing custom subdomains, internal container bridge networks, and automated Let's Encrypt SSL/TLS lifecycle renewals.
- **Hardened server infrastructure and edge networking**, implementing strict firewall rules, volume snapshot backups, and secure Cloudflare Tunnels to expose services without opening public ports.

Education

2021 - 2026

University of Ilorin, Ilorin NG - *B.Eng. Computer Engineering*
